

Work Smart Platforms, formerly SSS Roof Scaffold, are award winning passive fall prevention scaffold systems. For more than a decade we have been providing a safe working environment for all trades. Our roof scaffolding has many benefits, one of the major ones being that scaffold systems can be efficiently installed to existing roof structures in less than 10 minutes.

Once Work Smart Platforms' scaffolding systems are installed, with handrails and planks, it provides a safe working platform and perimeter fall protection. This negates the need for additional harnesses, positioning, or fall arrest systems.

Scaffolding system details

The entirely modular roof scaffold systems are durable and made from hot dipped galvanised steel. The main components are the professional contractor bracket (adjustable to suit roof pitch from 22-45 degrees), hand rail support and end protection, that can also double as a workbench mount.

All components are easily folded up into a compact, lightweight package that is easy to transport.

The various mounting options can be used on all types of roofs (tile, iron, slate), without damage to the surface or compromising the waterproofing of the roof.

The professional contractor brackets can also be used to permanently mount plant and machinery on a pitched roof, such as HVAC plant, solar panels or hot water services.

Work Smart Platforms' roof scaffolding is designed specifically for all trades who want to work safely on roofs:

- Carpenters
- Painters
- Solar installers
- Air conditioner installers
- Roof layers
- Plumbers
- Cleaners
- Glaziers
- Plasterers
- Renderers
- Electricians

Testing and recognition

Work Smart Platforms' roof scaffolding has been load tested to Australian and New Zealand Standards (AS/NZS 1576 series) and complies with Occupational Health and Safety Legislation. Australian and International patents apply to Work Smart Platforms' roof scaffold system.

At Work Smart Platforms, we are proud to have been recognised for our safety innovation and contribution to the safety of construction workers. We have received many national and international awards and patents for our roof scaffolding systems.

Benefits of our roof scaffolding systems

- Durability - hot dipped galvanised steel construction
- Quick to erect and assemble
- Easily transportable - flat-packable
- Adjustable for a wide range of roof pitch
- Suitable for iron, tile and slate roofs
- Suitable to mount permanent plant and machinery onto sloping roofs

If you're are looking to buy roof scaffolding that is the safest and best on the market, Work Smart Platforms has you covered with our huge range of premium quality roof scaffolding systems for sale. Contact us for more information or shop online.
